

CeDaR NEWS

CeDaR Interactive for Mobile volume 2 > issue 1 > february 2003

> > SPECIAL EDITION < <

Dear All,

May we bid you welcome back to the world of CeDaR with the a special edition of our newsletter, CeDaR News.

As 2003 gets going, Allround Informatika does not rest on its laurels: we have to report the latest news and developments regarding CeDaR – as they happen.

First and foremost, we are delighted to announce our participation as an exhibitor at the prestigious **Mobile Billing @ The 3GSM World Congress in Cannes on the 17th and 18th of February**. Those of you, who always wanted to ask special

Welcome

questions about CeDaR, take note! Your time has come!

Also, we are glad to inform you about the upgrade process of one of our most prestigious clients, **Rogers AT&T Wireless** and about the new category of the **GSM Association, the Standards Supporter Group** under which Allround Informatika holds membership.

We hope that you will have a great time reading this special edition. If you wish to know more about our company and products, please visit us at www.allround.net.

CeDaR Interactive for Mobile

>> *CeDaR is a range of software products and services that – depending on your needs – can consist of a TAP 3 Browser or a test data generator or a mediation device.*

>> *It is a powerful application that provides you the possibility to handle any CDR processing tasks in a comfortable and easy way.*

>> *As a Call Detail Record editor, analyzer and generator tool, CeDaR enables you to load, filter, view, edit, create or generate CDRs for testing or real production.*

>> *CeDaR can also be seen as a fully flexible software system, handling both sequential and ASN.1 formats (TAP, NRTRDE, GPRS, MMS, IN etc.). CeDaR writes records exactly as a switch would write them, and provides an overall solution for CDR processing problems.*

>> *You can export all data in HTML, TXT or XML format.*

Allround Exhibits in Cannes at Mobile Billing

Now in its 5th year, **Mobile Billing @ The 3GSM World Congress** is recognized as the world's most prestigious mobile billing event. As a developer of leading billing-related applications and more precisely call detail record handling solutions, Allround Informatika feels obliged to take part at such a key event of the GSM billing community.

You can register at our stand for our CeDaR presentations, which will be held in **Suquet A of the Noga Hilton Hotel** on the same floor as the exhibition in every hour.

By exhibiting at this event we give you the perfect opportunity to meet us in person, to get all the information you need about CeDaR, to answer your questions and share your ideas concerning call detail record handling.

Our stand is No. 29 – a place not to be missed! Please see page 2 for the exact location on the floor plan.

Furthermore, we have reserved a **meeting room** in the hotel of the exhibition, where – avoiding the chattering crowds – we will demonstrate you how CeDaR

could be an effective solution for your CDR handling related problems. During our exclusive product **presentation and workshop** you will see CeDaR in action and also meet the application areas through real-life case studies.

If you do not want to miss this golden opportunity, you can secure your place at this presentation by **registering** at the following e-mail address:

info@allround.net. Please give us your name, company and position, together with a time slot that is suitable for you.

Rogers upgrades to Scripting

>> After a year long usage of CeDaR Standard Edition, our first North American client, **Rogers AT&T Wireless** decided to upgrade to the

Scripting Edition of CeDaR - the highest and all encompassing version of our software. *Continued on page 2.*

Rogers upgrades to Scripting

Due to the wide range of application areas, Rogers also increases the number of concurrent client licences. The Scripting upgrade and Unix migration will be finished Q1 2003.

The Scripting Edition gives you the opportunity to develop macros via the graphical user interface and execute the macros interactively or in a scheduled manner or even driven by external systems using a simple API.

Some of the key features of the Scripting Edition:

- >> automated CDR generating
- >> enhanced performance on Unix platforms
- >> open interfaces and easy integration to other systems.

More details on Scripting in the next issue of CeDaR News!

GSMA Standards Supporter Group membership

We are delighted to inform our readers that ALLROUND Informatika have been found eligible to hold associate membership under the recently established additional category of GSMA Standards Supporter.

Therefore ALLROUND Informatika currently holds associate membership under two categories: Security Systems Supplier and GSMA Standards Supporter.

We believe that our accumulated knowledge and experience in software development and

particularly in the very special field of Call Detail Record handling makes us capable of taking an active part and playing a significant role in this category and in appropriate working groups, further enhancing the work of the GSM Association. ◆

Allround Exhibits in Cannes at Mobile Billing

As you can see on the floorplan, Stand 29 is the place where you can meet us at Mobile Billing in Cannes.

Don't forget that here you can also register for our CeDaR presentations!
