

TAP3.10 Statistics

Description

This CeDaR Utility generates statistics (based on record-types, timestamps, called/calling numbers etc.) from data in TAP3.10 format CDR files.

Benefits

This utility provides you with the possibility of preprocess analysis of TAP3.10 format CDR files (e.g. charge and tax values). It can be used for testing and controlling purposes too.

Further benefits:

- Easy integration to your existing system
- Easy operation and management via SNMP (from e.g. HP OpenView)
- Full scale logging

Application example

Having reliable statistical analysis of transferred TAP data is an essential need for every mobile network operator. These values can reveal the changes of subscriber habits, explore the areas where new services could improve the level of customer satisfaction and even raise the attention to possible FRAUD activity. Using statistical data, mobile network operators can recognize the changes of the market faster and react to them in time, get ahead of the business competition and get greater profit. In the end the whole company shares the positive results.
