

TAP3 Release Converter

Description

The TAP3 Release Converter converts CDR files of the previous TAP3 Releases to TAP3.10 back and forth.

Benefits

You can prevent your company from the inconvenience that occurs when TAP3 release versions change. You do not need to modify your TAP in/out processing. You can solve the problem of time-consuming development of your billing system (the requested modifications can take a long time typically when greater version changes occur such as to TAP3.10). Your TAP writer also can be tested using this utility.

Additional benefits:

- Easy integration to your existing system
- Easy operation and management via SNMP (from e.g. HP OpenView)
- Full scale logging

Application example

Using for example the TAP3.3 format and having the file conversion carried out as an external service is an expensive process. It can also take reasonable time and effort. The TAP3 Release Converter Utility solves this problem by automatically doing this conversion in place. Mobile network operators that have not yet upgraded to TAP3.10 can find this utility quite beneficial.
