NRTRDE Implementation Training - Be Prepared!

Nowadays combating and preventing losses caused by roamers' fraudulent behaviour represents a hot topic in the mobile industry discussions. The GSM Association decided the mandatory implementation of a new standard to combat roaming fraud - the Near Real Time Roaming Data Exchange (NRTRDE). The deadline for implementation of NRTRDE is mandatory for every GSM operator by 1st October 2008. To keep the deadline, it is time to secure the budget, set up responsibilities and start the implementation project now.

But there are still a couple of questions unanswered:

- What are the main business and technical challenges?

- Who is involved within your organization?

- What kind of vendors should be contacted?

- What are the key milestones during the implementation project?

- What are the major risks you should count with?

Allround Seminars

offers you a unique opportunity to get a clear picture about the challenges brought by the NRTRDE including all questions above: a 2-day training that enables you to be prepared for NRTRDE. The training is held at Allround's headquarters or at your premises, according to your needs.

Allround Seminars

give a frame to a high quality training program to all experts and decision makers working in the telecommunication area.

Next Training Days:

16-17 October 2008, Budapest

27-28 November 2008, Budapest

4-5 December 2008, Budapest

Having successfully organized several NRTRDE training with more than sixty participants from 29 countries, representing 41 mobile operators Allround decided to have several new events at various locations to further discuss the hot topics around NRTRDE implementations. Experts are invited for a roundtable discussion to exchange their thoughts and plans about how to ensure the winning strategy to change to the new standard.

"I found the workshop arranged by Allround quite useful. As far as I know, this was the first time that operators got together to openly discuss the implementation of NRTRDE, possible solutions and issues. Although I could find answers to all the issues that were raised. I really recommend that operators get together in such workshops and discuss all the aspects before starting an implementation."
